

INTRODUCING THE FIRST LITZ WIRE WOUND COIL FROM COILTEK® MANUFACTURING.

The 14x9" Elliptical GOLDSTALKER® *BLITZ* mono.

Specifically wound for the new GPX5000 detector this coil, coupled with the 'FINE GOLD' setting, has the potential to brighten up those faint targets, especially the smaller pieces at depths only seen on the new GPX5000.

The coils ability utilises the already popular shape and size of the 14x9" coil providing excellent manoeuvrability and sensitivity for pinpointing and depth.

Size: 348mm x 225mm **Weight:** 695g / 24.8oz

- Litz wire wound
- Specifically manufactured for the GPX5000
- Heightened target response and clarity
- Robust and lightweight design
- Elliptical shape for best manoeuvrability
- Easy pinpointing
- Good depth with excellent sensitivity

I jumped at the chance to field test a 14x9" GOLDSTALKER® Blitz series mono.

With 30 years of experience, I am very particular about the performance of any coil I use and the 14x9" GOLDSTALKER® Blitz series mono ticks all the boxes for me. I found it to be stable and very sensitive on small targets, along with amazing depth on larger targets.

I found a sub gram nugget in medium to heavy mineralised ground at 8" and a solid signal 6 feet away produced an 1816 George III shilling at 14" deep.

I used the 14x9" GOLDSTALKER® Blitz mono for a day on areas I have searched for years. The number of musket balls, bullets, and other junk targets along with 4 nuggets and the shilling, pleasantly surprised me. The 14x9" Blitz series mono will be a winner in many areas.

Sensitive, stable and light weight, I'm HOOKED!
